EDUCATION

Bachelor of Science in Computer Engineering

University of Cincinnati, Ohio

Aug 2022 - April 2027

Cincinnati, OH

SKILLS

- **Languages:** Rust, Go, Python, TypeScript, C++, SQL
- **AI/LLM:** Multi-agent systems, ACP, LangChain, prompt-to-video pipelines, semantic search
- **Backend & Infra:** Bun, Node.js, Spring Boot, Docker, PostgreSQL, RabbitMQ, Hazelcast, AWS, Azure
- **Developer Tools:** JSON-RPC, Tree-sitter, LSPs

EXPERIENCE

CampusOS

May 2026 - Present

CEO & Co-Founder

Pune, India

- Went to schools to understand their problems, called to **100+** schools, did discovery to understand the problems they face to build out solutions for them.
- Got paying customers within the first two weeks of building. Did **collison installations** for the first 2 clients/schools. Did 24 hours customer support.
- built **WhatsApp** integration to send mass announcements for schools, built an attendance tracking system with **NFC** tags and QR codes.

Story

Sept 2025 - Dec 2025

AI Engineer Intern

San Francisco, CA

- **Shipped** an iOS AI video backend in **1 week** for prompt-to-video generation (script, characters, music, render).
- **Built** a custom music agent with JSON-RPC scene-aware soundtrack generation.
- **Implemented** multi-agent communication workflows to speed script/character/media generation and reduce time-to-video.

Honeywell

Sept 2024 - Dec 2024

Software Engineering Intern

Atlanta, GA

- **Engineered** a distributed log-search and triage platform handling **90TB+ telemetry/day**, reducing mean time to detection (MTTD) by **70%**.
- **Implemented** semantic retrieval and anomaly-triage pipelines within cloud microservices, partnering with SRE/platform teams to productionize incident workflows.
- **Owned** the end-to-end incident intelligence stack (Python, FAISS, LangChain, Azure), optimizing low-latency query paths for faster root-cause analysis.

Honeywell

Jan 2024 - April 2024

Software Engineering Intern

Alpharetta, GA

- **Reduced** customer onboarding time by **64%** by redesigning workflows and backend architecture (Docker, PostgreSQL, Spring Boot).
- **Improved** reliability/fault tolerance via Spring Cloud Azure, RabbitMQ, and Hazelcast, validated with JUnit tests.

PROJECTS

Zed | *Rust, Electron, HelixDB*

[GitHub](#)

- **Contributed** to open-source development in Zed as part of the **Zed Guild**, supporting core project improvements and community-driven features.
- **Collaborated** on upstream contributions to Zed, helping review, implement, and refine enhancements across the codebase.

the-search-thing | *Rust, Electron, HelixDB*

[GitHub](#)

- **Engineered** a local-first semantic search app across files, images, and videos with **sub-ms** response targets.
- **Architected** an Electron UI with a Rust sidecar over JSON-RPC (NDJSON over stdio) to deliver stable, low-latency app-to-core communication.

LEADERSHIP

RevolutionUC — Web Lead | *NextJS, TypeScript, Node.js*

[Live](#) | [GitHub](#)

- **Led** the web team for UC's student-run **24-hour** hackathon, owning site architecture, release cadence, and coordination with organizers.
- **Shipped** marketing, registration, and day-of attendee flows with TypeScript with a stable integration path to the event API.
- **Mentored** contributors on code review, frontend conventions, and deployment so the org could iterate quickly across hackathon cycles.

Bearcats Electric Racing — Data Acquisition Lead | *Python, Grafana, Raspberry Pi*

- **Led** the data acquisition subteam for the electric formula-style program, owning sensor interfaces, on-car logging, and trackside validation.
- **Built** Python acquisition tooling and Grafana dashboards on embedded hardware to capture, buffer, and visualize vehicle telemetry during tests and events.
- **Mentored** teammates on signal quality, logging hygiene, and iterative debugging to shorten the loop between runs and design decisions.
